

Chapter

Human Evolution

1. While studying the stages in the evolution of man, a well-developed chin is observed in SQP 2025

- (a) Homo habilis
- (b) Homo erectus
- (c) Homo sapiens
- (d) Australopithecus

2. Industrial Melanism was observed in: MAIN 2024

- (a) Mice
- (b) Peppered moth
- (c) House flies
- (d) Crow

3. Assertion (A) : Sympathetic nervous system prepares the body for violent action against abnormal conditions.

Reason (R) : Sympathetic nervous system accelerates heartbeat. Which of the following is correct? **MAIN 2024**

- (a) Both Assertion and Reason True
- (b) Assertion is True, Reason is False
- (c) Assertion is False but Reason is True
- (d) Both Assertion and Reason are False

4. The false statement about Cro-Magnon man is SQP 2021

- (a) he walked erect and was swift
- (b) he was intelligent and cultured
- (c) his cranial cavity was less than Homo sapiens
- (d) he started metal work, painting and farming

5. The name Homo Sapiens can be assigned to. SQP 2021

- (a) Java man
- (b) Peking man
- (c) Cro-Magnon man
- (d) Shivalik man

6. According to Lamarck, well-developed auricle muscles of rabbit have evolved due to. COMP 2023

- (a) internal vital force
- (b) continuous use
- (c) increasing need
- (d) All of these

7. The birth place of human beings. COMP 2021

8. Differentiate between the terms Phenotype and Genotype SQP 2025

9. State Mendel's Law of Segregation SQP 2025

**10. Which creature was closely related to humans? When did they evolve?
SQP 2021**

Solution

1. Thus (c) is correct option.

2. (b) Peppered moth.

In **peppered moths**, dark-colored forms increased in polluted areas for better camouflage, an example of **natural selection**.

3. Correct option: (a) **Both Assertion and Reason True**

The **sympathetic nervous system** prepares the body for action during stress or danger by **accelerating the heartbeat** and other physiological changes, enabling a quick response.

4. (c) His cranial cavity was less than Homo sapiens.

Cro-Magnon man walked erect, was intelligent and cultured, and engaged in metal work, painting, and farming. However, his **cranial capacity was equal to or slightly larger than modern Homo sapiens**, so the statement that it was less is false.

5. The name **Homo sapiens** can be assigned to: (c) **Cro-Magnon man**

6. According to Lamarck, well-developed auricle muscles of rabbit have evolved due to: (d) **All of these**

7. Africa

8.

Phenotype	Genotype
Observable characteristic of an organism.	Set of genes present in the cells of an organism.
Can be influenced by environment.	Controlled genetically and inherited.

9. The two members of a pair of factors (alleles) **separate during gamete formation**, so that each gamete receives only one allele of the pair.

10. **Neanderthals** – They evolved around **500,000 to 600,000 years ago**.
