

Chapter

The Reproductive System

1. Gestation period of human is **MAIN 2023**

- (a) 250 days
- (b) 280 days
- (c) 170 days
- (d) 140 days

2. The site of maturation of human sperms is the **MAIN 2023**

- (a) seminiferous tubule
- (b) interstitial cells
- (c) prostate gland
- (d) epididymis

3. The middle piece of sperm has **MAIN 2021**

- (a) golgi body
- (b) ER
- (c) ribosome
- (d) mitochondria

4. The middle piece of sperm has **SQP 2021**

- (a) mitochondria
- (b) golgibody
- (c) ribosome

(d) ER

5. The structure that connects placenta and the human foetus. SQP 2025, 2024

6. A single highly coiled tube where sperms are stored, get concentrated and mature is known as SQP 2022

(a) vas efferentia

(d) epididymis

(c) vas deferens

(d) seminiferous tubule

7. Fertilization takes place in MAIN 2023

(a) fimbriae

(b) uterus

(c) vagina

(d) oviduct

8. The structure formed by the villi of the foetus and the uterus of the mother.

MAIN 2023

9. The structure formed after release of ovum from graafian follicle.

COMP 2021

10. A fluid surrounding the developing embryo. MAIN 2023

11. The fully developed part of ovary containing mature egg. MAIN 2021

12. The accessory gland in human male whose secretion activates the sperms.

COMP 2023

13. Menopause is the stoppage of menstruation. SQP 2022

14. Amniotic fluid acts as a shock absorber. SQP 2023

15. Seminal vesicles contribute to the fluid substance of the seminal fluid.

MAIN 2023

16. Fertilization occurs in the uterus . COMP 2023

17. Placenta produces certain hormones. COMP 2022

18. Gestation and Parturition SQP 2022

19. What is the significance of Testes being placed in Scrotal sacs? SQP 2025

20. What is Parthenocarpy? Give one example. SQP 2025

21. The structure of the sperm which helps to penetrate the egg membrane of the ovum is____. MAIN 2020

22. The connecting link between the foetus and placenta is called_____.

SQP 2023

23. The expulsion of the foetus from the mother's body is called_____.

COMP 2021

24. Cowper's gland SQP 2023

25. Acrosome MAIN 2021

26. Amnion MAIN 2020

27. Placenta MAIN 2023

28. Draw a neat, labelled diagram of a human sperm. SQP 2025

29. How long does the sperms take to become mature? SQP 2021

30. How does placenta acts as an endocrine gland? MAIN 2023

31. Define the term implantation. MAIN 2022

32. Difference between Sperm and Ovum. SQP 2021

33. Sperm and Semen. MAIN 2023

34. State the difference between identical and fraternal twins. COMP 2022

Solution

1. Gestation period of human: **(b) 280 days**
2. The site of maturation of human sperms is: **(d) Epididymis**
3. The middle piece of sperm has: **(d) Mitochondria**
4. Thus (a) is correct option.
5. Umbilical Cord
6. A single highly coiled tube where sperms are stored, get concentrated, and mature is: **(b) Epididymis**
7. Fertilization takes place in: **(d) Oviduct**
8. Placenta
9. Corpus luteum
10. Amniotic fluid
11. Graafian follicle
12. Seminal vesicle
13. True
14. False
15. True
16. False
17. True
18. **Gestation and Parturition**

Gestation: The total time period in which an embryo develops fully inside the uterus.

Parturition: The process of childbirth after the gestation period.

19. To maintain an ideal temperature **2–3°C lower than body temperature** for the survival of sperms.

20. **Parthenocarpy** is the development of fruits without fertilization.

Example: Apple, Tomato

21. acrosome

22. umbilical cord

23. parturition

24. **Cowper's gland** – Secretes a fluid that serves as a lubricant.

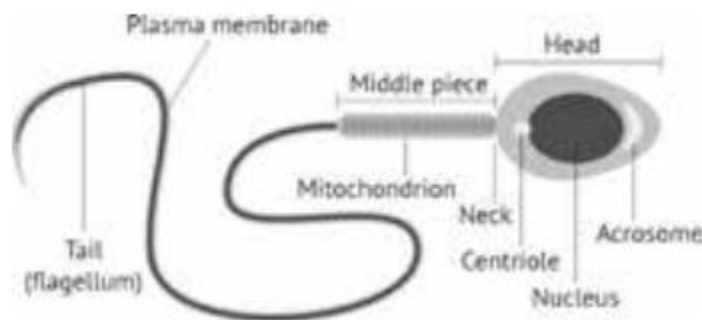

25. Secretes an enzyme which helps

26. To protect the embryo.

27. **Placenta** – Facilitates exchange of materials like **respiratory gases, nutrients, and wastes** between mother and foetus.

28.

Diagram of human sperm.

29. 10 to 14 days.

30. **Placenta** acts as an endocrine gland by secreting **oestrogen and progesterone**.

31. **Implantation** is the process of attaching the **zygote to the wall of the uterus**.

32.

Sperm	Ovum
It is the male gamete.	It is the female gamete.
It is produced in the testis.	It is produced in the ovary.
It is elongated and contains head, middle piece, and tail.	It is round and has three outer layers.

33.

Sperm	Semen
It is the male gamete.	It is a milky alkaline fluid produced by the male reproductive system.
It is produced by the testis.	It is produced by the accessory glands.

34.

Identical Twins	Fraternal Twins
Formed by splitting of a single fertilized egg into two equal parts.	Formed by two eggs fertilized by two sperms at the same time.
Both babies are of the same sex .	Babies may be same or different sexes .
Share a common placenta .	Have two separate placentas .
