

Chapter

Pollution

1. Two natural sources of pollution. SQP 2023
2. The cause of eutrophication in lake. COMP 2023
3. The undesirable change in the environment leading to its deterioration.
SQP 2025
4. Mention two harmful effects of noise pollution. MAIN 2024
5. Define thermal pollution. What are its effects ? SQP 2023
6. What are the effects of noise pollution ? MAIN 2021
7. _____ is an example of particulate pollutant. MANI 2021
8. _____ are the chief cause of depletion of ozone layer. COMP 2023
9. Hot water is given out from _____ power plant. SQP 2021
10. State two objectives of Swachh Bharat Abhiyan. SQP 2025
11. Carbon monoxide is dangerous when inhaled in excess. Comment on the statement. MAIN 2024
12. State two harmful effects of acid rain on the environment. MAIN 2024
13. Study the given figure and answer the following questions : COMP 2021

- (i) What does the figure depict ?
- (ii) Write three sources of the figure.

14. Study the picture given below and answer the questions:

SQP 2025

- (i) How does water get polluted?
- (ii) What is the effect of water pollution on human life?
- (iii) Mention one control measure to stop the pollution of water bodies.

15. Given below is a representation of a kind of pollution. Study the same and answer the questions that follow: MAIN 2021

- (i) Name the kind of pollution.
- (ii) List any three common sources of this pollution.
- (iii) Mention three harmful effects of this pollution on human health.
- (iv) Explain the term 'Pollutant'.
- (v) Name two soil pollutants.

Solution

1. Two natural sources of pollution: Forest fires and Volcanic eruptions.
2. Fertilizers
3. Pollution
4. Damage ear drum / Nervous irritability/ Disturbs sleep
5. **Thermal pollution** is caused by the discharge of **hot water** into lakes and streams by industries that use water for cooling.

Effects:

- Alters aquatic life, replacing desirable species with **undesirable or pathogenic forms**.
- Affects the **reproductive capability** of aquatic organisms.

6. Effects of noise pollution:

1. Prolonged exposure to noise above 80 dB can **damage the eardrum**.
2. Disturbs sleep, leading to **nervous disorders**.
3. **Disturbs birds** and other wildlife.

7. Dust

8. CFCs

9. Thermal

10. To clean streets, roads, cities and towns To eliminate open defecation by constructing toilets. Management of solid and liquid waste.

11. **Carbon monoxide is dangerous when inhaled in excess** because it combines with **haemoglobin** to form **carboxyhemoglobin**, reducing the **oxygen supply to tissues**.

12. Harmful effects of acid rain :

- (i) It corrodes buildings and metal structures.
- (ii) It can also affect human health by causing respiratory diseases like asthma.
- (iii) It leads to the acidification of lakes and rivers, which harms aquatic life

13. (i) Noise pollution

- (ii) (a) Loud speaker
- (b) Radio
- (c) Horns of automobiles.

14. (i) Sewage, industrial effluents, oil spills

- (ii) Spread of diseases like diarrhea, cholera, typhoid.
- (iii) Sewage must be treated before letting it into water bodies.

15. (i) Noise pollution.

- (ii) The sources of noise pollution are loud speakers, horns of automobiles, jet engines etc.
- (iii) (a) Prolonged exposure to noise above 80 db can damage eardrum.
- (b) Disturbs sleep thereby leads to nervous disorders.
- (c) It interferes communication.
- (iv) Pollutants are the unwanted substances introduced into the environment which adversely affect the environment.
- (v) Soil pollutants are fertilisers, pesticides, lead biomedical wastes etc.
