

Chapter

Manufacturing Industries

1. Based on the ownership, what type of industry is Visakhapatnam Steel Plant?
MAIN 2024
2. What is meant by cooperative sector industry? MAIN 2024
3. Mention two problems faced by the Sugar industry of India. MAIN 2023
4. Where is TATA STEEL located? MAIN 2023
5. Why is the Silk industry losing the market in recent times? MAIN 2023
6. State four geographical factors which should be kept in mind while setting up an agrobased industry. MAIN 2022
7. State two steps taken by the government to overcome the problems faced by the jute industry in India. MAIN 2021
8. Mention two problems faced by the sugar industry in India. SQP 2023
9. State two reasons why cottage industries have developed in many parts of India? Give the names of two important cottage industries. SQP 2023
10. Explain the following terms: MAIN 2024
 - (a) Sericulture
 - (b) Integrated steel plant
11. State two conditions that favour the location of cotton textile industry in Ahmedabad. MAIN 2024
12. How are the industries important for India? (Two points) MAIN 2023
13. State the difference between Agro based industry and Forest based industry. Give one example for each type of industry. MAIN 2023
14. Why are the cotton textile industries mostly located in the coastal areas. SQP 2022

15. Why are the petrochemical products in great demand? MAIN 2023

16. State any one advantage of locating Iron and Steel industry at Rourkela.
MAIN 2021

17. Give two points of difference between a public sector and private sector industry. MAIN 2023

18. Differentiate between an integrated steel plant and a mini steel plant.
SQP 2022

19. From where Bokaro Steel Plant obtains its raw materials? SQP 2022

20. Give one reason to explain each of the following: MAIN 2024

- (i) Mini-steel plants help in conservation of coal.
- (ii) Location of sugar industry is shifting to the southern part of India.
- (iii) The electronic industry is growing at a fast rate.

21. Which of the following is NOT a centre for the iron and steel industry?
MAIN 2024

- (a) Bhilai
- (b) Bengaluru
- (c) Rourkela
- (d) Vishakhapatnam

22. Which of the following is a basic/key industry? MAIN 2023

- (a) Iron and Steel Industry
- (b) Silk Industry
- (c) Electronic Industry
- (d) Cotton textile Industry

Solution

1. Visakhapatnam Steel Plant is a **public sector industry**, as it is owned and operated by the government.
2. A **cooperative sector industry** is an industry **owned and managed collectively** by a group of individuals or cooperative societies. The **profits and benefits are shared** among the members, and **each member has a role in decision-making**. These industries are usually set up for the **mutual benefit of all members**.
3. Two problems faced by the sugar industry of India are:
 1. **Seasonal Production** – Sugarcane is harvested during specific months, causing irregular production cycles.
 2. **High Production Costs** – Many sugar mills use outdated machinery, leading to inefficiency and higher expenses.
4. TATA STEEL is located in **Jamshedpur, Jharkhand**.
5. The Silk industry is losing its market in recent times because **synthetic fibers are cheaper, widely available, and increasingly preferred over natural silk**.
6. Four geographical factors to consider while setting up an agro-based industry are:
 1. **Proximity to raw materials** – Reduces transportation costs and ensures a steady supply.
 2. **Suitable climate** – Necessary for proper processing and storage of agricultural produce.
 3. **Availability of water** – Essential for production processes and cleaning.
 4. **Good transportation facilities** – For easy movement of raw materials to the industry and finished goods to the market.

7. Two steps taken by the government to overcome problems faced by the jute industry in India are:

1. **Mandatory jute packaging** – Certain products like food grains and sugar are required to be packed in jute bags, ensuring steady demand for jute.
2. **Financial assistance for modernization** – Providing funds to upgrade jute mills, improve efficiency, and make them more competitive.

8. Two problems faced by the sugar industry in India are:

1. **Distance from mills** – Sugarcane farms are often located far from sugar mills, leading to delays in processing and loss of cane quality.
2. **Short crushing season** – The sugarcane crushing season is brief, causing the industry to operate seasonally rather than year-round.

9. Two reasons why cottage industries have developed in many parts of India:

1. **Abundant Skilled Labor** – India has a long tradition of artisans and craftsmen, especially in villages, which supports the growth of cottage industries.
2. **Low Capital Requirement** – These industries need minimal investment and can be run using simple tools and locally available materials.

Two important cottage industries: Handloom weaving and pottery.

10. (a) **Sericulture:** Sericulture is the cultivation of silkworms for producing silk. It involves rearing silkworms, feeding them primarily on mulberry leaves, and extracting silk fibers from their cocoons to make silk threads.

(b) **Integrated Steel Plant:** An integrated steel plant is a large industrial facility where all stages of steel production—from processing raw materials like iron ore, coal, and limestone to producing finished steel—are carried out at a single location.

11. Two conditions that favour the location of cotton textile industry in Ahmedabad are:

1. **Proximity to Raw Materials:** Ahmedabad is near major cotton-growing regions, ensuring easy and continuous supply of raw cotton.
2. **Favorable Climate:** The humid climate of Ahmedabad is ideal for cotton spinning and weaving, as it prevents the threads from breaking.

12. Industries are important for India for the following reasons:

1. **Economic Growth:** They contribute significantly to the country's GDP and provide employment opportunities, boosting the economy.
2. **Infrastructure Development:** Industries drive the development of infrastructure like roads, ports, and power facilities, supporting further economic and social growth.

13.

Agro-based Industry	Forest-based Industry
Relies on agricultural products such as crops, fibers, or livestock for its raw materials.	Relies on forest resources like wood, resin and bamboo for its raw materials.
Example: Textile industry (cotton, jute).	Example: Paper industry (wood, bamboo).

14. Cotton textile industries are mostly located in coastal areas because:

1. **Proximity to Ports** – Coastal locations provide easy access to ports, making it convenient to import machinery and export finished textile products.
2. **Favorable Climate** – The humid coastal climate is ideal for cotton spinning and weaving, as it prevents the cotton fibers from breaking.

15. Petrochemical products are in great demand because they are **versatile and cost-effective**, being used in a wide range of industries such as **plastics**,

synthetic fibers, fertilizers, and chemicals, making them essential in modern manufacturing and daily life.

16. One advantage of locating the Iron and Steel industry at Rourkela is its **proximity to iron ore reserves** from Odisha and Jharkhand, which **reduces transportation costs** and ensures a steady supply of raw materials for efficient steel production.

17. Two points of difference between a **public sector** and a **private sector** industry are:

Aspect	Public Sector Industry	Private Sector Industry
Ownership	Owned and managed by the government.	Owned and managed by private individuals or companies.
Objective	Focuses on public welfare and economic development rather than profit.	Main aim is to earn profit for the owners or shareholders.

18.

Integrated Steel Plant	Mini Steel Plant
Produces steel from basic raw materials like iron ore and coal.	Primarily uses scrap steel or sponge iron as raw materials.
Involves the entire steel-making process from raw materials to finished products.	Focuses on specific stages of steel production, not all processes.
Requires large capital investment and is typically large in scale.	Requires less capital investment and is smaller in scale.

19. Bokaro Steel Plant obtains its raw materials as follows:

- **Coal:** From Bokaro and Jharia coalfields
- **Iron ore:** From Kiriburu mines in Keonjhar district, Odisha
- **Limestone:** From Bhavantpur, Jharkhand
- **Dolomite:** From Palamau, Jharkhand

20. (i) Mini-steel plants help in the conservation of coal because they use electric arc furnaces that rely on electricity instead of coal, reducing coal consumption.

(ii) The sugar industry is shifting to southern India due to favorable climate for sugarcane, longer crushing seasons, and higher sucrose content in the crop.

(iii) The electronic industry is growing rapidly due to rising demand for electronic goods, technological advancements, and supportive government initiatives.

21. Thus (b) Bengaluru is correct option.

22. Thus (a) Iron and Steel Industry is correct option.
