

Chapter

Health Education

1. Which statement best defines Health? SQP 2024

- (a) Absence of disease only
- (b) Freedom from deformities
- (c) Complete physical, mental and social wellbeing
- (d) Limited to avoiding unhealthy habits

2. Which of the following is NOT listed among the Objectives of Health Education? COMP 2022

- (a) Development of healthy habits
- (b) Prevention of diseases
- (c) Imparting knowledge of health and hygiene
- (d) Encouraging unhealthy lifestyles

3. Which option accurately reflects Health Education? MAIN 2023

- (a) A passive process offering mere information
- (b) A process that informs, motivates and helps adopt healthy lifestyles
- (c) Solely focused on disease cure
- (d) Limited to professional research without public engagement

4. A mother is concerned about her child's nutrition and wonders if food supplements are necessary for his growth. She consults a pediatrician to understand the role of supplements in children's health. MAIN 2022

- (i) What are food supplements, and what role do they play in a child's diet?
- (ii) What are two advantages and two disadvantages of using food supplements for children?

5. Aryan, a university student, is often fatigued and struggles with concentration during classes. Despite getting enough sleep, he frequently experiences headaches and lacks energy throughout the day. Upon visiting a

doctor, he is advised to improve his diet and maintain a balanced lifestyle to enhance his overall well-being. **MAIN 2021**

- (i) According to the definition of health, what factors contribute to complete well-being?
- (ii) How can Aryan improve his health through health education and lifestyle modifications?

6. What is a Pre-Competition Meal, according to the text? SQP 2021

- (a) A meal consumed a day after competition
- (b) Food eaten on or just before the competition day for optimal performance
- (c) A method to avoid hydration
- (d) A strategy for fasting throughout competition

7. What is the main purpose of a During Competition Meal ? COMP 2024

- (a) To induce heaviness
- (b) To preserve muscle glycogen and stabilize blood pressure
- (c) To eliminate water intake entirely
- (d) To eat only fatty foods

8. Assertion (A) : Drinking at least 6-7 liters of water daily is essential for good health.

Reason (R) : Water helps in digestion, temperature regulation, and waste elimination from the body. **SQP 2024**

- (a) Both A and R are true, and R is the correct explanation of A.
- (b) Both A and R are true, but R is not the correct explanation of A.
- (c) A is true, but R is false.
- (d) A is false, but R is true

9. Assertion (A) : Junk food consumption should be minimized for better health.

Reason (R) : Junk food contains excessive fats, sugars, and salts, which can lead to obesity and other health issues. **COMP 2023**

- (a) Both A and R are true, and R is the correct explanation of A.
- (b) Both A and R are true, but R is not the correct explanation of A.

- (c) A is true, but R is false.
- (d) A is false, but R is true.

10. Look at the image of the person brushing their teeth. What is the best way to maintain good oral hygiene? **SQP 2024**

- (a) Brushing once a week and using a lot of sugar
- (b) Brushing at least twice a day and flossing regularly
- (c) Using only mouthwash without brushing
- (d) Eating sugary foods without cleaning teeth

11. To maintain proper hair care, applying _____ helps retain the hair's natural black color. **COMP 2022**

- (a) Oil and water
- (b) Amla or eggs
- (c) Shampoo and conditioner
- (d) Baking soda

12. Which of the following is NOT a recommended practice for eye care? **MAIN 2023**

- (a) Washing eyes with cold water
- (b) Performing eye exercises
- (c) Watching TV from a very close distance
- (d) Consuming foods rich in vitamins A and C

13. _____ is the science of food and its relationship to health. **SQP 2024**

- (a) Dietetics
- (b) Nutrition

- (c) Biology
- (d) Hygiene

14. Look at the image of handwashing. What is the most important reason for washing hands with soap and water? COMP 2022

- (a) To remove visible dirt only
- (b) To prevent the spread of germs and infections
- (c) To make hands smell good
- (d) To cool down hands

15. Define health. MAIN 2021

16. What is the main goal of health education? COMP 2022

17. Mention any two objectives of health education. SQP 2023

18. Why is personal hygiene important? MAIN 2024

19. Sneha, a school teacher, notices that many of her students frequently fall sick and lack knowledge about proper hygiene practices. She decides to implement a health education program in her school to promote hygiene and disease prevention. SQP 2023

- (i) What are the primary objectives of health education that Sneha should focus on?
- (ii) Why is health education important in schools, and how can it benefit students in the long term?

20. An online advertisement promotes a new energy supplement, claiming it enhances strength and boosts immunity. A nutritionist advises caution before purchasing such products. **SQP 2024**

(i) What precautions should individuals take before consuming food supplements?

(ii) Why is it important to consult a doctor before starting any dietary supplement?

Solution

1. (c) Complete physical, mental and social wellbeing

Health is not just the absence of disease or deformities. True health encompasses **physical, mental, and social well-being**, allowing individuals to live actively, handle stress, and contribute meaningfully to society.

2. (d) Encouraging unhealthy lifestyles

Health education aims to **promote healthy habits, prevent diseases, and impart knowledge about hygiene and well-being**. Encouraging unhealthy lifestyles goes against the objectives of health education.

3. (b) A process that informs, motivates and helps adopt healthy lifestyles

Health education is **an active process** that not only provides information but also motivates and enables individuals to adopt and maintain healthy habits, promoting overall well-being and preventing diseases.

4. Here is the complete, clear, exam-ready answer in simple language:

(i) **Food supplements** are concentrated sources of nutrients like vitamins, minerals, proteins, or herbal extracts that are taken in addition to regular food.

Role in a child's diet:

- (a) They help provide essential nutrients if the child's diet lacks them.
- (b) They boost immunity and support normal growth and development.

(ii) Advantages:

- (a) They help fill nutritional gaps when the child's diet is not balanced.
- (b) They support healthy bone, brain, and overall physical development.

Disadvantages:

- (a) They are unnecessary if the child already eats a balanced diet.
- (b) Overuse can cause side effects or toxicity, such as excessive vitamin intake harming the body.

5. Here is the complete, clear, exam-ready answer in simple language:

(i) **According to the definition of health**, complete well-being includes three key factors:

(a) Physical Health:

Proper nutrition, regular exercise, adequate rest, and a strong immune system.

(b) Mental Health:

Emotional stability, ability to handle stress, good concentration, and proper sleep.

(c) Social Health:

Healthy relationships, positive social interactions, and good communication with others.

(ii) Aryan can improve his health through **health education and lifestyle changes** in the following ways:

(a) Balanced Diet:

Eat nutritious food containing vitamins, minerals, proteins, and enough water to increase energy levels.

(b) Regular Exercise:

Daily physical activity improves stamina, boosts mood, and helps the brain function better.

(c) Proper Rest and Stress Control:

Maintain a regular sleep schedule, avoid overthinking, and practice relaxation techniques like deep breathing or yoga.

(d) Healthy Social Life:

Interact with friends, share concerns, and maintain positive relationships to support emotional well-being.

These modifications can help Aryan overcome fatigue, improve concentration, and enhance overall well-being.

6. (b) Food eaten on or just before the competition day for optimal performance

A pre-competition meal is the food an athlete eats on the day of the competition or shortly before it. Its purpose is to provide the necessary energy, nutrients, and fluids needed for peak performance. It helps maintain blood sugar levels, prevents fatigue, and ensures the athlete has enough stamina during the event.

7. (b) To preserve muscle glycogen and stabilize blood pressure

A During Competition Meal helps athletes maintain their energy and hydration levels while performing. Its main purpose is to **preserve muscle glycogen** (the stored energy in muscles) and **keep blood pressure stable**. This ensures the athlete can perform consistently without fatigue or dehydration.

8. (a) Both A and R are true, and R is the correct explanation of A.

Water is vital for maintaining good health. Although actual water needs may vary from person to person, **adequate daily hydration** is essential.

9. (a) Both A and R are true, and R is the correct explanation of A.

Junk food is high in **unhealthy fats, sugars, and salt**, which can cause **obesity, diabetes, high blood pressure, and heart diseases**. Reducing its consumption helps maintain a **balanced diet and overall health**. The reason clearly explains the assertion.

10. (b) Brushing at least twice a day and flossing regularly

Maintaining good oral hygiene is crucial for preventing tooth decay, gum disease, and bad breath. Brushing twice a day removes plaque and food particles, while flossing cleans between teeth, reducing the risk of cavities. Avoiding excessive sugary foods and visiting the dentist regularly also contribute to healthy teeth and gums.

11. (b) Amla or eggs

Amla and eggs contain **essential nutrients, vitamins, and proteins** that strengthen hair, prevent premature graying, and maintain its natural black

color. Amla's antioxidants protect hair pigmentation, while egg proteins repair and nourish damaged hair.

12. (c) Watching TV from a very close distance

Watching TV too closely strains the eyes, leading to **eye fatigue, dryness, and myopia**. Recommended eye care practices include washing eyes with cold water, performing eye exercises, and consuming **vitamin A- and C-rich foods** to maintain healthy vision.

13. (b) Nutrition

Nutrition is the science that examines the **relationship between food and health**. It involves understanding how the body **processes, absorbs, and utilizes nutrients** like carbohydrates, proteins, fats, vitamins, and minerals. Proper nutrition supports **growth, energy production, disease prevention, and tissue repair**, making a balanced diet essential for maintaining overall health.

14. (b) To prevent the spread of germs and infections

Proper handwashing with soap and water is the most effective way to remove germs, bacteria, and viruses that can cause infections and diseases. The image highlights washing between fingers, under nails, and palms, ensuring complete hand hygiene. This simple habit significantly reduces the risk of illnesses such as diarrhea, flu, and respiratory infections.

15. **Health** is defined as a state of **complete physical, mental, and social well-being**, not merely the absence of disease or infirmity. A person is considered healthy when they are physically fit, mentally stable, and socially active. Good health enables individuals to **perform daily activities efficiently, manage stress, and contribute positively to society**.

16. The main goal of **health education** is to **inform, motivate, and empower individuals** to adopt and maintain healthy practices and lifestyles. It focuses on creating awareness about **hygiene, disease prevention, nutrition, and overall physical and mental well-being**, helping people make informed choices that improve their quality of life and reduce health risks.

17. Two objectives of **health education** are:

(i) **Development of Healthy Habits** – It encourages individuals to adopt good practices like regular exercise, balanced diet, personal hygiene, and stress management to lead a healthier lifestyle.

(ii) **Prevention of Diseases** – By creating awareness about vaccinations, sanitation, proper nutrition, and first aid, health education helps prevent the occurrence of diseases and promotes overall well-being.

18. Personal hygiene is important because it helps **maintain good health, prevent infections, and promote self-confidence**. Poor hygiene can lead to bacterial or viral infections, unpleasant body odor, and social discomfort. Regular practices like **bathing, handwashing, oral care, and clean clothing** play a key role in keeping the body healthy and socially presentable.

19. (i) Sneha should focus on the following primary objectives of health education:

- **Development of healthy habits** among students, such as regular handwashing and personal hygiene.
- **Prevention of infectious diseases** through hygiene awareness.
- **Educating students about proper nutrition** and a balanced diet.
- **Encouraging first aid knowledge** to handle emergencies.
- **Promoting a safe and clean school environment** to reduce health risks.

(ii) **Importance and long-term benefits of health education in schools:**

- Helps students **develop lifelong healthy habits**, ensuring better physical and mental well-being.
- **Reduces absenteeism** by preventing common illnesses.
- Enhances **mental and social well-being**, building confidence and positive behavior.
- Creates awareness about **disease prevention and hygiene**, empowering students to make informed health choices throughout life.

20. (i) Precautions before consuming food supplements:

- Check the **ingredients** to ensure they are safe and suitable.
- Ensure the supplement is **approved by regulatory authorities** (e.g., FSSAI, FDA).
- Avoid products with **unknown additives** or exaggerated claims.
- Follow the **recommended dosage**; do not self-prescribe high amounts.

(ii) Importance of consulting a doctor:

- A doctor can **assess nutritional needs** and confirm if supplements are necessary.
- Prevent **harmful interactions** with medications or health conditions.
- Ensure **safe usage** and avoid side effects or toxicity.
- Help choose the **right supplement** for specific health or performance goals.
